PROVISIONING DATA

INTRODUCTION

Relgo Apps provide provision to add multiple modules and features in single application according to the customer requirements.

PREREQUISITIES

- Create account in RNC (http://www.relgo.com)
- Verify and create identity cast.
- Subscribe in RAS (http://www.relgo.com/ras) with generated identity cast.
- Complete Bootstrap installations.

PROVISIONING COMPONENTS

- Module
- Feature
- Task
- Scenario

Module: It is an independent part in application. Enterprise helps to manage business processes of various departments & functions through centralized application.

Feature: Feature is nothing but a part in module.

Task: Task is nothing but a Form.we will have different forms related to different scenarios. Form is a window or screen that contains numerous fields to enter data. Forms are created to deliver the application in a structured manner.

Scenario: Scenarios can be very detailed, indicating exactly how someone works with the user interface, or reasonably high-level describing the critical business actions but not indicating how they're performed.
