

## VERSIONING PACKAGES TESTING IN RAS

- If tester wants to test the package before publishing to appstore then user has to copy the URL and past the URL in RAS.
- Under setup there is an option called hotfix package installations, click on that menu then below screen appears.
- Under setup there is another option called updates Data (This option will be available only if the user has a developer license)

The screenshot displays the Relgo Automation Studio interface. The top navigation bar includes 'Setup', 'Organization', 'Initialization', 'Test', and 'Go Live'. The main content area is titled 'Updates Data > Install Updates Data'. It features a search box for 'Package Url' containing 'https://relgo.com/relgoapp:' and a 'Search' button. Below the search box, there are 'Check All' and 'Uncheck All' options. A table lists the package details and its version forms.
