PROCESS 3: SETUP ORDER PROVISIONING AND DELIVERY PLANNING FOR PRODUCTS

SCENARIO 2: SETUP ITEM SPECIFIC PROVISIONING, SOURCING AND PRODUCTION MECHANISM FOR ITEMS

Introduction

Relgo marketplace is the platform provided to present products in their own store or third party store and facilitate a transaction, whereas products delivered and fulfilled by wholesalers.

Prerequisites

- Create account in RNC (<u>http://relgo.com/</u>)
- Verify and create identity cast.
- Subscribe in RAS (<u>http://www.relgo.com/ras/</u>) with generated identity cast.
- Install bootstrap and market place related processes.

Overview

Overview of the process

- Setup Order for provisioning.
- Delivery planning for Products.

SETUP EXTENSION FORM

Login with Employee account in ERP, Material Management →Manage Store →Manage Items & Categories

Here in manage items and category for a particular item we can add extension forms

			0 – 0 ×
← → C	RPDevCloud/ManageStore.aspx		☆ () :

Enter Item extension name, select Extension form type, select application and select user forms as above screen.

Example:

- Enter item extension name as a Dispatch plan.
- Extension form type as a Dispatch form.
- Select application Order flow.
- Select user forms Dispatch plan for service items.

Create Integration Points for overall orders flow (Dispatch plan, production App)

Integration Point

- Integration is the process of integrating data between two different modules (or) applications.
- When we need to transfer any form data from one application to another application for a functionality purpose, we create an integration point. The source and target address needs to be specified for transferring data

Select id: dispatch plan / product app

Type of mapping: EVG

Select module: Orders flow

Target location: license/ dispatch form / production form

External variable group: dispatch/ production

New External Variable Group

- External variable group (EVG) is nothing but a template which consist of target application information (data/url's) which are used in integration process
- It is used to map source form variable to target form variable.
