

PROCEDURE FOR APPS TO NON APPS

CREATION OF INTEGRATING POINTS

We require four forms to create integration points.

- Add Integration Point.
- Add External group.
- Map Integration Point.
- New External Variable Group.

INTEGRATION POINT

Integration point (IP) is nothing but a template which consist of source application information (data/url's) which are used in integration process

EXTERNAL GROUP

It is used to map variable to variable.

MAP INTEGRATION POINT

It is used to link the specific IP with specific EVG.

EXTERNAL VARIABLE GROUP

- External variable group (EVG) is nothing but a template which consist of target application information (data/url's) which are used in integration process
- It is used to map source form variable to target form variable.

ADD INTEGRATION POINT

*Integration Point Name	<input type="text" value="Vendor ip"/>
Description	<input type="text" value="Ip for Integrate vendor form from apps to nonapps"/>
Variables	<input type="text" value="Customer Name,Email
Address:,Mobile,Country,State,City"/>
Post Back Url	<input type="text"/>
Type of Mapping	<input type="text" value="staging"/>

Variables: Variables you want to give integration.

Post back URL: If you want the user to redirect to other website

Type of mapping: Select type of mapping as “Staging”

ADD EXTERNAL GROUP

- It is used to map variable to variable. Once the integration point is created. Then select External Variable Group and enter the group name then click on “Add” button which is shown in below screen.

External Variable Settings > EVG View

Group Name	<input type="text" value="vendor group"/>
Type of Mapping	<input type="text" value="staging"/>
*Select Evg Variables	<input type="text" value="first name,last name,emailid,organisation
name,phone number,mobile number,tin
number,cst number,primary
address,secondary"/>
Post Back Url	<input type="text" value="http://192.168.1.55:1815/relgoerp/ERPlogin.as"/>

MAP INTEGRATION POINT

- It is used to link the Integration Point with target location. Now select Map Integration point with Staging.
- Fill all the fields and click on “Add” Button which is shown below.

[External Variable Settings > view](#)

*Select Integration Point	Vendor ip
Type of Mapping	staging
*Select Module	ordersflow
External Variable Group	vendor group

[Update](#) [Delete](#)

NEW EXTERNAL VARIABLE GROUP

- Linking source form variable to target form variable.
- Add Variables to EVG with the data to be populated during run time and it can be populated using binding time like group / scope / Default value / Data source variable (It varies dynamically).

[External Variable Settings > New External Variable Group](#)

Type of Mapping	staging
Select Binding Group	vendor group
Select Target Variables	first name
*Binding Type	Integration Point
Select IP	Vendor ip
IP Variables	Customer Name

[Cancel](#) [Add](#)

Binding Type: Select binding type as Integration point.

After completion of adding the integration point then go to manage form action and click on the check box of “integration” then you will get a popup.
