

Deployment Help Document

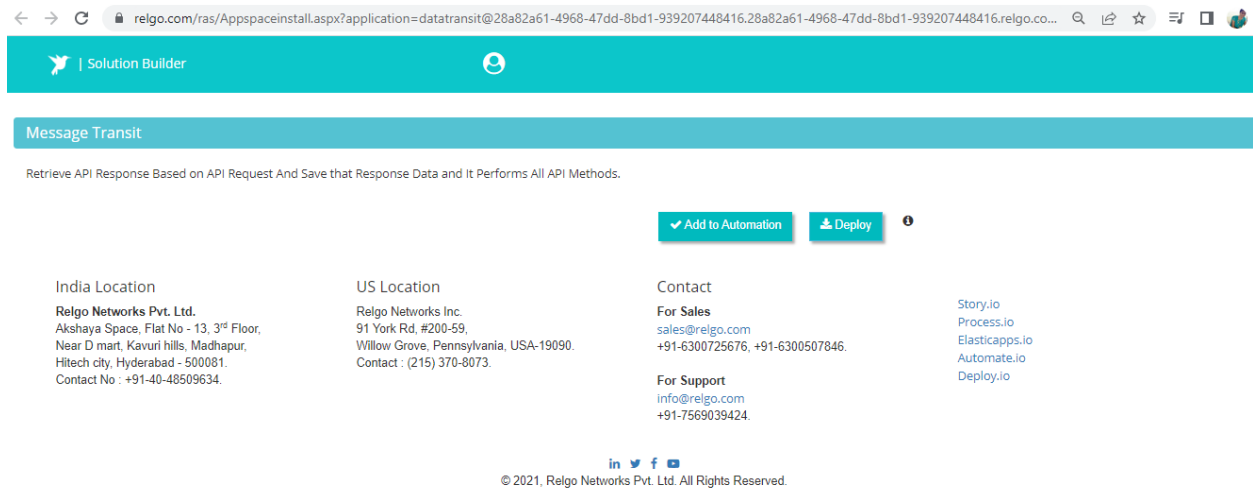

So lets see how the deployment process needs to be done.

Through cloud Databases like Docker and Azure.

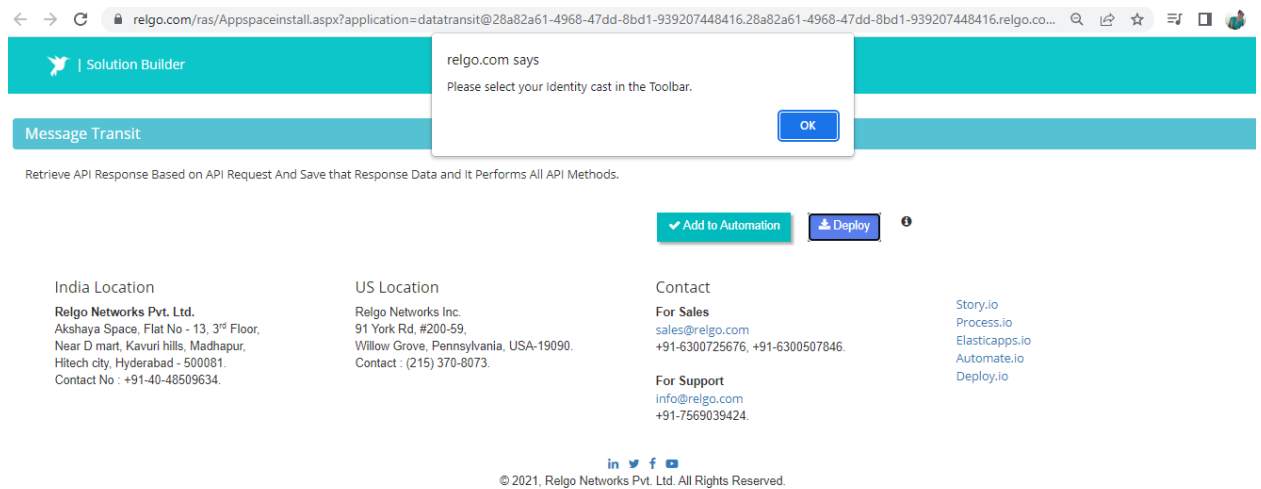

- Install the database to PC.
- Go to Browse App store

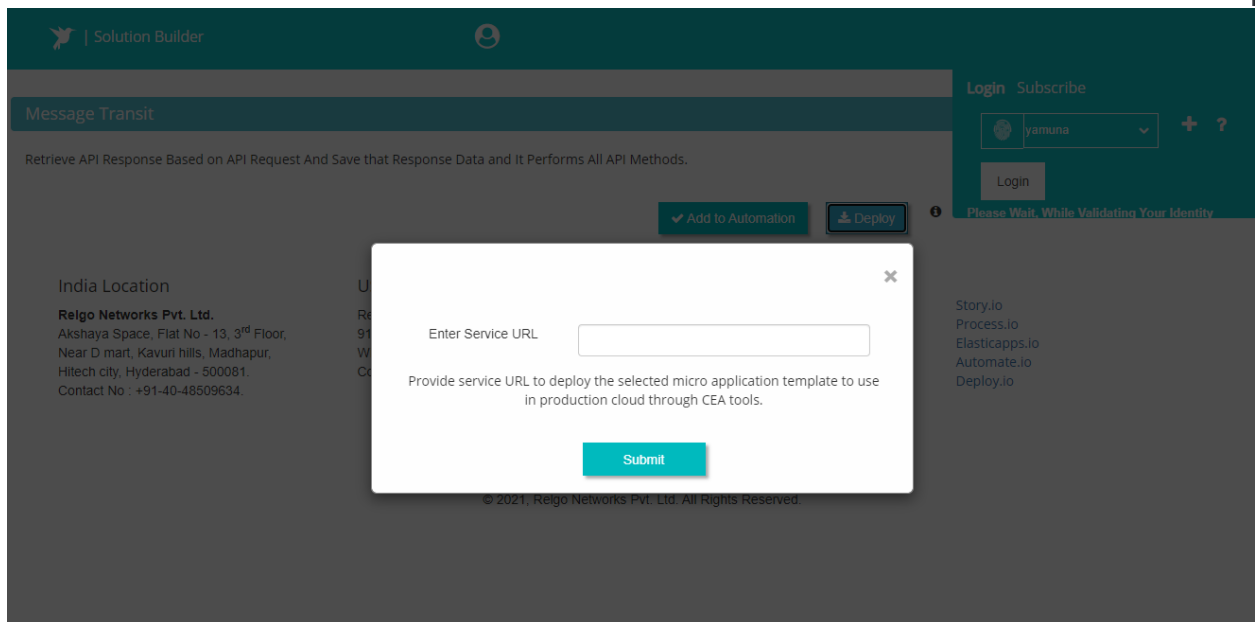

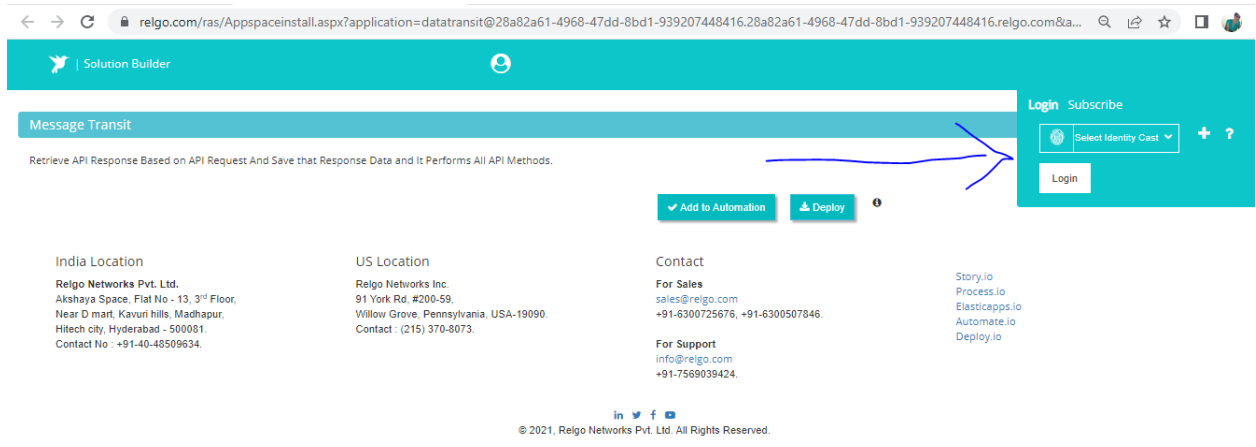

- Click on message transit

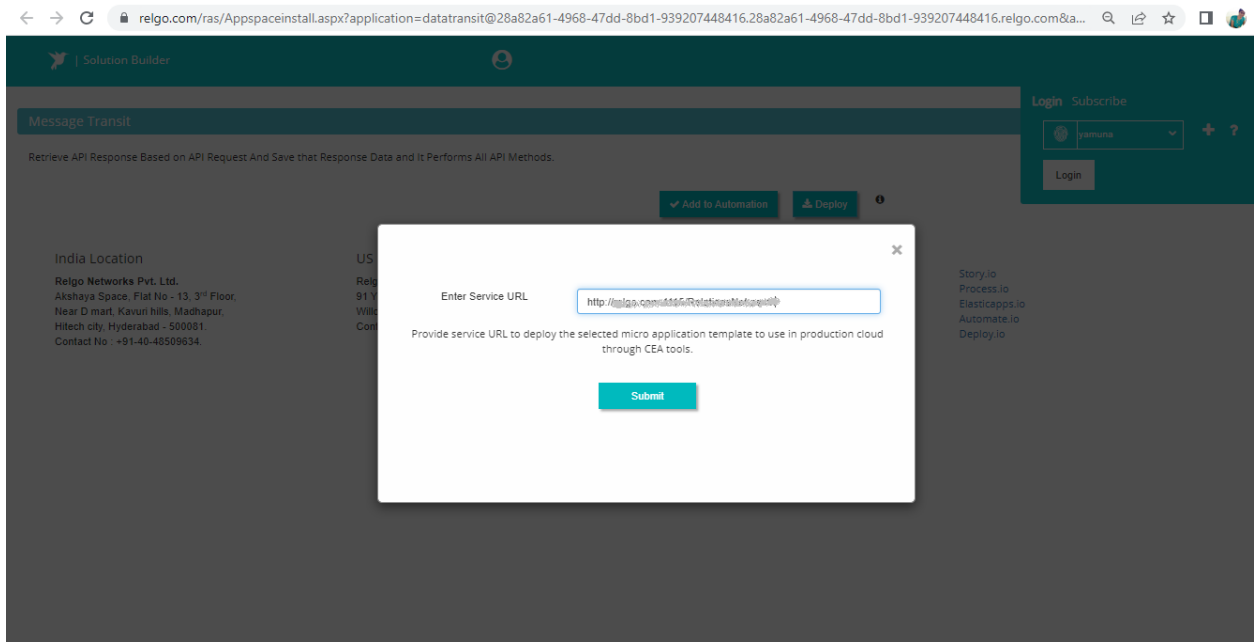

- Click on “Deploy”

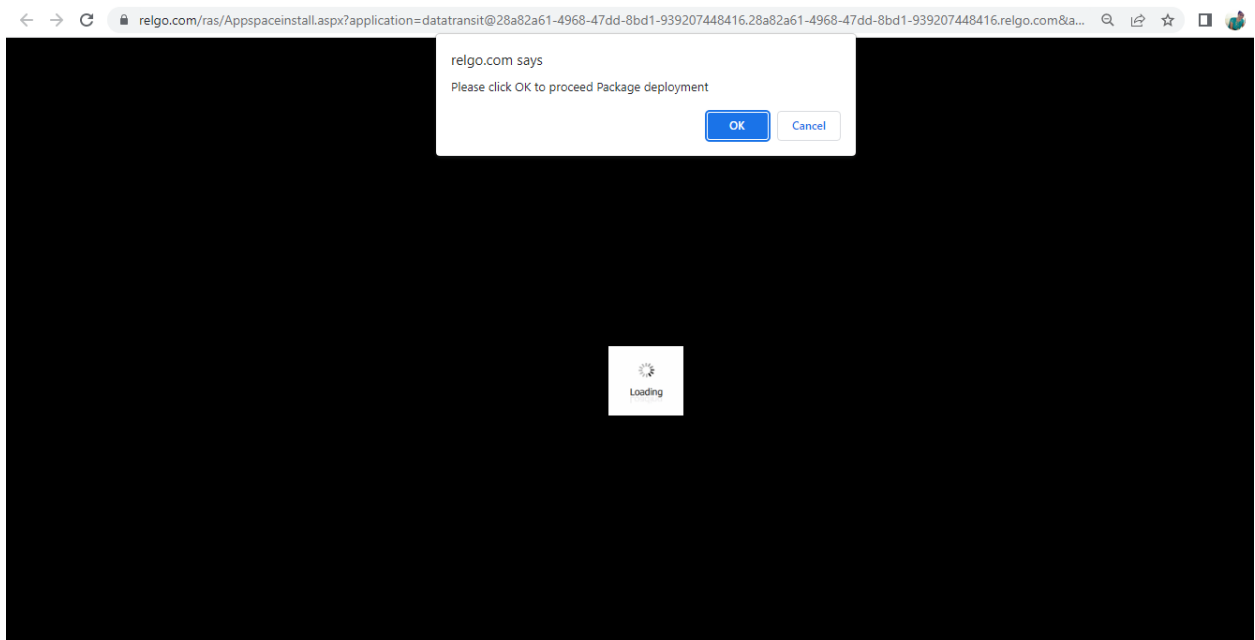

- Then Click on ok .
- Select your identity and click on deploy.

- Need to enter appropriate relations net URL based on your cloud database.
 → Docker URL@
 → Azure URL@

- Click on submit.

- Click on OK. Then installation process will start.

Solution Builder

Message Transit

Retrieve API Response Based on API Request And Save that Response Data and It Performs All API Methods.
