VERSION CONTROL

INTRODUCTION

- Version Control is an interface between Analysts, Developers and App Store.
- Version Control is used for giving check-ins and check-outs. There are two types of Version Controls.
 - 1. Centralized (has only one repository)
 - 2. Distributed (has multiple repositories).

PREREQUISITIES

- Create account in RNC (<u>http://www.relgo.com</u>)
- Verify and create identity cast.
- Subscribe in RAS (<u>http://www.relgo.com/ras</u>) with generated identity cast.
- Complete Bootstrap installations.

CHECK-IN

• The changes made by the Developers for forms, UX layouts, provisioning data and automization data will be given as check-ins to the version account. In version account ,Check-in menu consist of fields like check- in forms, provisioning data , automization data,cloud data and menu data which are given by developers.
