

Overview of Network, Group, Relation

What is Network?

Network is a significant feature used to build and maintain a group of people specifying the relation type between the entities. Use the Shared Network to invite people to join a network created for a specific purpose and add tags for additional information. This feature is used to create a new network into which groups and relations can be added. In Workspace we have one default network that is called My Network.

What is Group?

Group is a feature used to create a new group under any of the existing networks. Under this Group, user can create multiple relations (Relations here is users, one can add no of relations to the single group based upon his requirement).

What is Relation?

Relation feature is used to add a new relation/contact under a selected group and selected network.
