

MANAGE UX LAYOUT

INTRODUCTION

Form is a window or screen that contains numerous fields to enter data. Forms are created to deliver the application in a structured manner and also it is a particular way in which application exists or appears.

FORMS CREATION

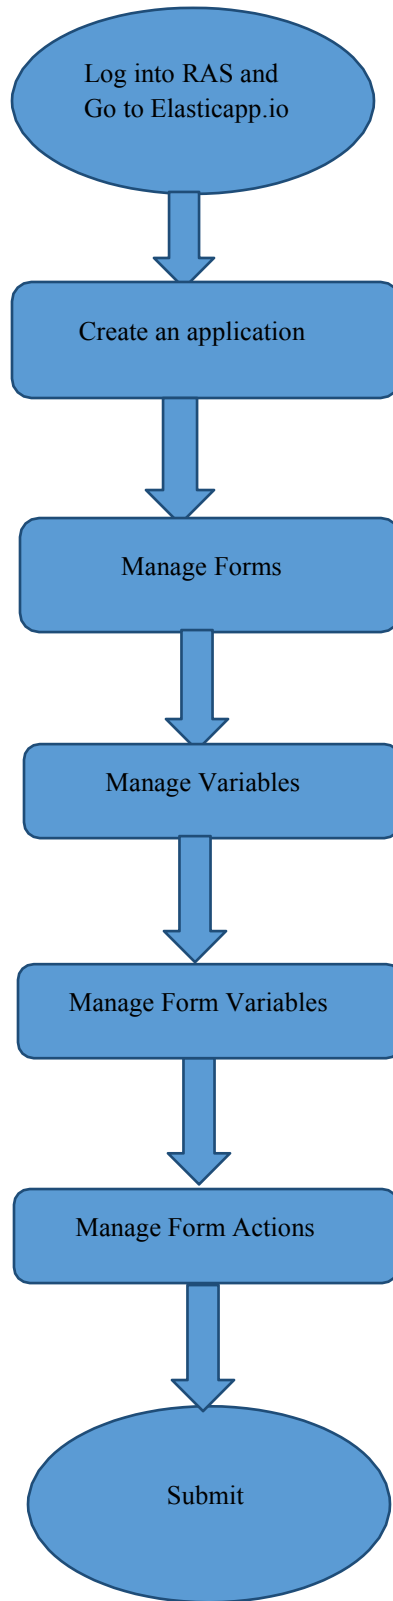

We have five steps to create a form. They are:

1. Manage Forms.
2. Mange Variables.
3. Manage Form Variables.
4. Manage Form Actions.
5. Manage UX Layout.

PREREQUISITIES

- Create account in RNC (<http://www.relgo.com>)
- Verify and create identity cast.
- Subscribe in RAS (<http://www.relgo.com/ras>) with generated identity cast.
- Complete Bootstrap installations.

RELGO APPS FORM CREATION FLOW

MANAGE FORMS

Manage Forms are used to create forms in a specific application, Here we can create any number of forms in an application

Manage form is a way to get into the functionality and succeed in handling the application

MANAGE VARIABLES

These manage variables are used for variable creation and there is no possibility to exist a form without variables. By using some set of predefined relations, we can create variables.

MANAGE FORM VARIABLES

Mandatory to select form in manage form.

These manage form variables are used to bind the variables to the form

MANAGE FORM ACTIONS

This section is used to create actions to a form

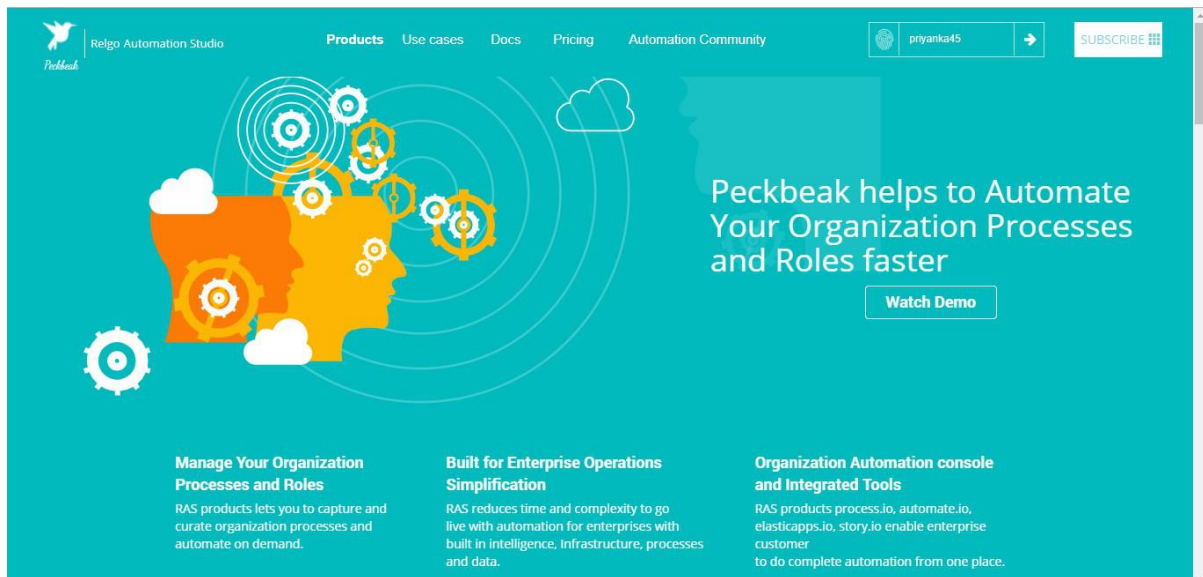

A form without actions is useless and to make that form useful, we use this manage form actions.

MANAGE UX LAYOUT

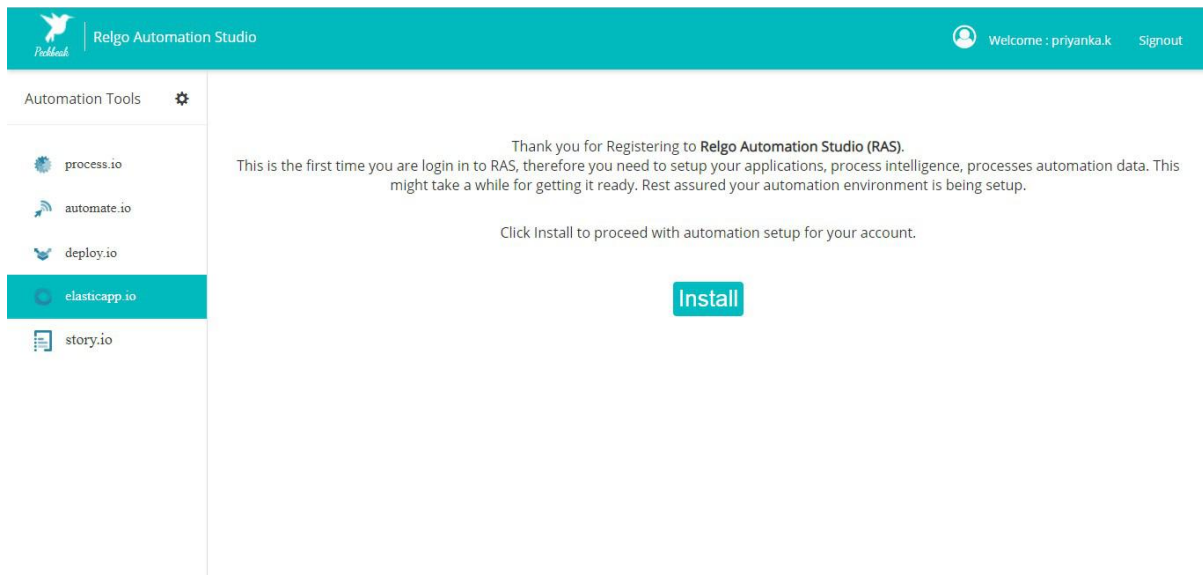

This session is used to give richness to the form

Layout is an empty template, based on requirement you can add variables to the layout.

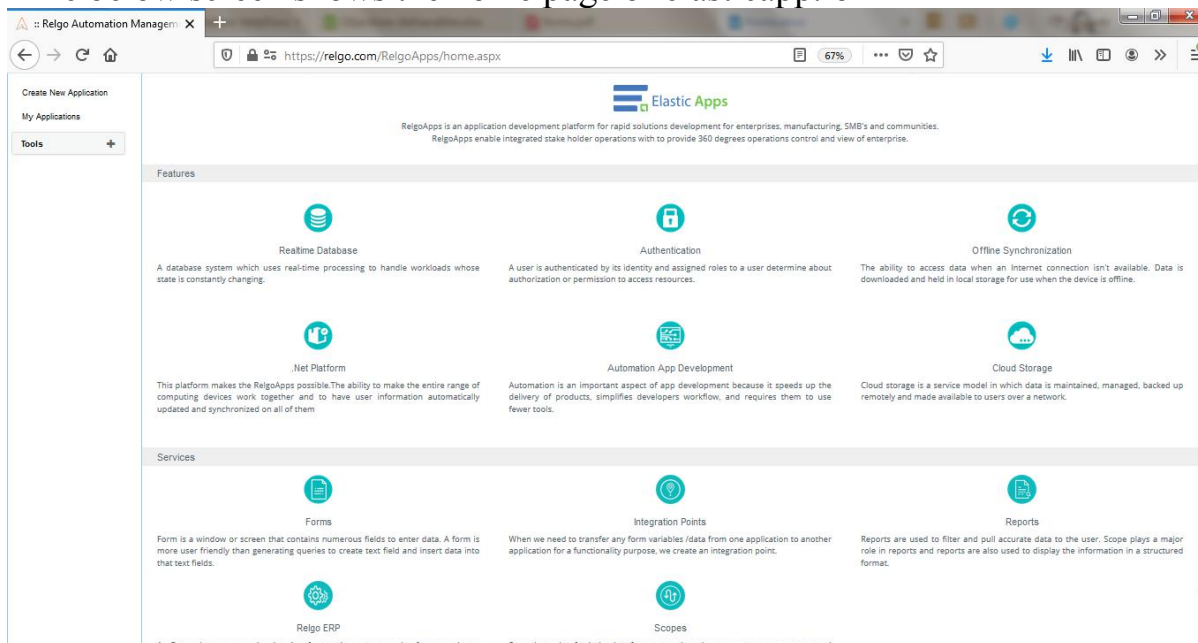

Login to the account with your particular credentials

After logging in to the app with your credentials, you can see the below screen. Here you can see many tools, based on the user requirements they use their tools. To develop your own application, go to RAS Account Elasticapp.io

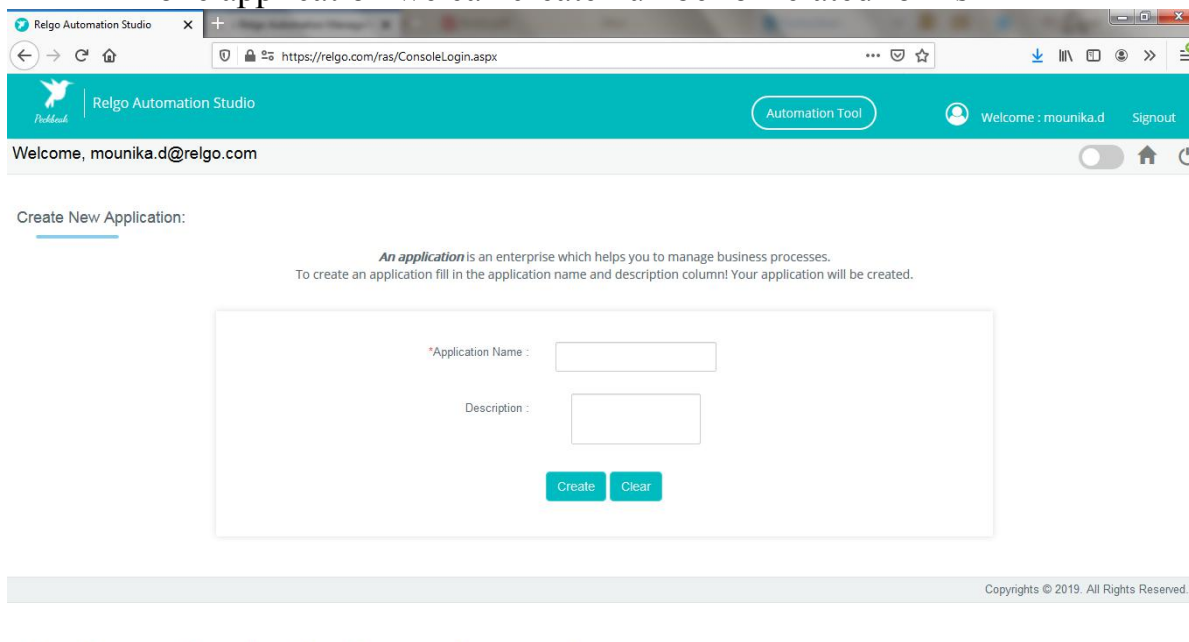

The below screen shows the home page of elasticapp.io

Application Creation

To create your own application, click on “Create New Application” which is shown below

In one application we can create number of related forms

- **Application Name:** Provide a Unique & desired application name.
- **Description:** Add description related to the application.

After entering the details click on “create” option then application will be created.

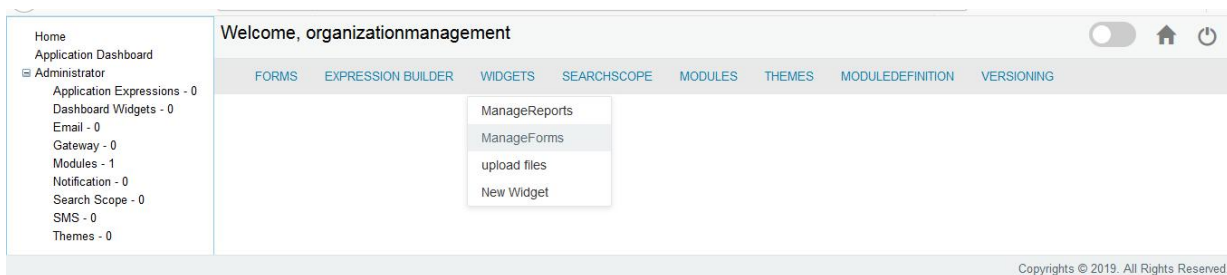

To find the created application, click on “My Applications”.

To create your own form, select the created application which is shown in above screen.

To design the application, click on “Designer” which is shown in below screen.

By Clicking on Designer the below screen appears.

Select widgets ---> Manage Forms

In manage forms we have four steps to create a form. They are:

1. Manage Forms.
2. Manage variables.
3. Manage Form Variable.
4. MANGE Form Action.

The flow to create forms, variables and buttons in an application.

- This is not a mandatory field.
- Layout is an empty template, based on requirement you can add variables to the layout.

MANAGE UX LAYOUT:-

UX Layout is used for enhancing user satisfaction with a product by improving accessibility and pleasure.

Here, we can create our own UX layout for forms

- For UX layout, first we have to create “Bootstrap “network and “Layout” group in admin level, in which application we want to create form layouts.
- In Manage Forms after selecting the form, you can be able to create layout for form in Manage UX Layout Tab.

Go to RAS Account Elastiapp.io My Applications Designer
Widgets Manage UX Layouts.

Create Layout

- Layout contains bunch of variables and groups you want to show in form
 - i. Layout Name: If you want to change the layout then give your own layout from default layout.
 - ii. Css file: This is used to apply css classes to the variables

By using URL path, you can add any other styles (or) external css files

- After that click link button '+' to add Layout to the form.

Css File :

Create Row

- Layout is created based on rows, so for adding groups or variables to layout first you have to select row
- If there is no row present in layout, check checkbox to create new row.

Create Group

- Group is used to group form variables which are used for specific theme.
 1. New row: create row /select row in which you want to show that group.
 2. Group Types: This is not a mandatory one. They are three types for grouping form variables. They are:
 - **Panel:** If you want grouping to the variables.
 - **Field set:** This nothing but the group name.
 - **Section:** There is a basic one called “Div”, in this you can give any style.
 - **Group Name:** Give relative name to Group.
 - **Group Styles:** Based on the Group Types, mention styles applied for that particular one.
- After that, click “ADD” button.

ADD FORM VARIABLES

- **Select form Variables:** Select form variable which we want add to the layout.(If you want to give video, audio, navigation time then select “Client Side Cntrls”)
- **Label Text:** If we want to change variable name in form, enter the name for that variable.
- **Help Text:** This control is used for giving some instructions in the form with respect to the variables or groups.
- **Control Styles:** select styles, applied for Variable control.
- **Label Styles:** select styles, applied for adjusting variable name appearance.
- **Insertion Position:** Within the row, after which variable we want to insert this variable, select respective position.
- **Select Row Variable:** Select Variable for Insert Selected form Variable.
- After that, click “ADD” button
