PROVISIONING DATA

INTRODUCTION

Giving particular feature of particular module to our customers is known as provisioning and automization.

Relgo Apps provide provision to add multiple modules and features in single application according to the customer requirements.

PREREQUISITIES

- Create account in RNC (<u>http://www.relgo.com</u>)
- Verify and create identity cast.
- Subscribe in RAS (<u>http://www.relgo.com/ras</u>) with generated identity cast.
- Complete Bootstrap installations.

PROVISIONING COMPONENTS

Module Feature Task Scenario

Module: It is an independent part in application. Enterprise helps to manage business processes of various departments & functions through centralized application.

Feature: Feature is nothing but a part in module.

Task:Task is nothing but a Form. Form is a window or screen that contains numerous fields to enter data. Forms are created to deliver the application in a structured manner.

Scenario:Scenarios can be very detailed, indicating exactly how someone works with the user interface, or reasonably high-level describing the critical business actions but not indicating how they're performed.

PROCEDURE FOR ADDING PROVISIONING DATA

Login to the account with your particular credentials

After logging to the account, a form will be displayed which is shown below, Here you can see many tools, based on the user requirements they use their tools. To develop your own application, go to RAS Account Elasticapp.io

| Automation Tools ◆ ● process.io Thank you for Registering to Rego Automation Studio (RAS). > utomate.io This is the first time you are login in to RAS, therefore your audomation environment is being setup. > deploy io Lick Install to proceed with automation setup for your account.
